# OVERVIEW OF R SHINY

STAT 408 -  
R SHINY

SERVER CODE  
UI CODE

R Shiny provides a way to create interactive visualizations and web applets

There are two key components of an R Shiny Script:

- 1 The ui (user interface) provides a way for the user to interactive with the visualization and for the program to capture input values.
- 2 The server piece takes those outputs and applies them to R code.
